- SOLD IN PACKS OF 6 WAX GUN STICKS FOR USE WITH LOW HEAT GUN
- 1 PACKET WILL PRODUCE APPROX. 26-28 WAX SEALS

INSTRUCTIONS FOR USE - WAX GLUE GUN STICKS AND GUN

- 1.** Introduce the wax stick through the collar at the back of the gun. Place the gun on a piece of cardboard or wood to act as a protective surface.
- 2.** Plug in the gun using the adaptor provided. Allow it to warm for 7 to 10 minutes pressing the trigger from time to time so that the wax stick can progress inside the barrel. If necessary place a second wax stick into the top of the gun.
- 3.** Gently press the trigger to apply the wax to your chosen surface to be sealed. It will not be necessary to spread the wax. Immediately and firmly press your seal stamp into the molten wax. After 2 minutes drying time the seal should be formed. Once you have completed using your wax gun unplug from the power outlet.

WARNING

To reduce fire risks, electrical shocks and injuries to people use this electrical device with caution and read all instructions before starting to use this product.
Keep out of reach of children.

TIPS & TRICKS

- Wax liquefies above 85 degrees and should not be used on objects that would not resist such temperature.
- Surfaces should be clean from grease, cleaned and dry.
- Unplug the wax gun when not in use for more than 30 mins.
- When changing the wax stick allow a few minutes for it to warm up. Don't force the wax stick inside.
- Little bits of wax can be removed with a heated up knife. Wax drops can easily be removed when cold by hand.
- Pressing the wax stick too hard can block the conduit. In this case, heat up the gun for ten minutes and take out the stick. If it's too far inside, take another one, let it melt onto one end of the gun nozzle and insert it in the conduit, allowing it to stick to the one inside, then pull out with a slight rotation.
- Use J Herbin Wax Cleaning Sticks to keep your Wax Gun clean.
- Regular practice will ensure you get the perfect result every time. However at first you may not be happy with the result. If this is the case you can carefully re-melt the wax blob with a soft flame and reapply the seal.
- You can achieve different and beautiful results by mixing two colours of wax together to form a marble effect or by sprinkling the wax with gold or silver ink dust for a beautiful finishing touch.
- You can use this gun to produce wax seals on many surfaces including: paper, wood, plastic, material and cardboard.
- These seals are suitable for use in the postal system due to their flexible nature. They will not crack when set.
